*Notes about the samples:*

- For legacy JSTOR, the committed to retain date (\$c) is the applicable phase date (see table 1 below)
- For new JSTOR, the committed to retain date (\$c) is the applicable JACS date (and in future, whatever other means of identifying/committing to archive JSTOR titles).
- To signify the page-level validation of the JSTOR legacy archives, the \$i reads "page-level" (the \$l/\$z pair is at the volume level though, as previously agreed upon).
- Conditions tracked: brittle paper
- Completeness tracked: missing vol's, reprints
